Certified compostable packaging suppliers	112

# INTRODUCTION

This resource has been compiled to assist retailers identify compostable packaging that is acceptable under the Single-Use Plastic By-Law. More details on the composting standards and the composting process can be found in the **'What Happens to Compostable Packaging?'** flyer.

There is an extensive range of products available that claim to be 'biodegradable' and 'eco', as such it can be difficult to determine which items are genuinely compostable. As defined within the by-law, suitable compostable products must breakdown to a set standard, within a defined period of time, without leaving residual toxins. Any products that are certified under the Australian home compostable standard (AS 5810-2010) or the Australian (AS 4736), US (ASTM D6400) and the European (EN 13432) industrial standards are considered suitable under the by-law. Some paper products in this guide are listed as WAFOR under Composting Certification Status; WAFOR stands for Widely Acceptable for Organics Recycling, these products are suitable for composting.

- This product list is not exhaustive and there may be appropriate products, manufacturers and suppliers not listed in this manual.
- Non-plastic recyclable packaging (e.g. aluminium) is also compliant under the by-law but have not been included in this edition of the toolkit.
- Retailers are encouraged to do further research into packaging options.

Avoidance of packaging where possible is encouraged as the most preferable option to reduce waste plastics, however this resource should provide you with a good listing of what alternative products are available, and acceptable under the by-law.

Prices listed were accurate at the time of printing but are subject to change and are to be used as indicative only.

## SINGLE USE PLASTIC CHANGE-OVER CALCULATOR

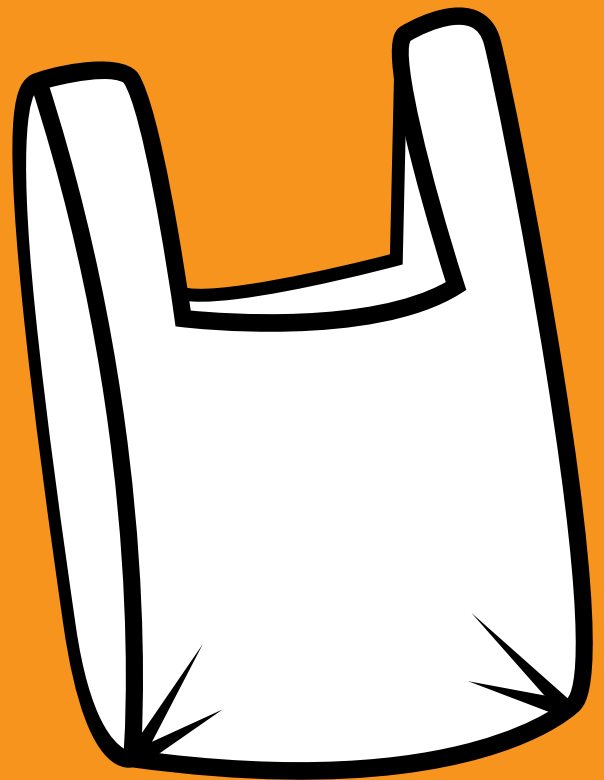

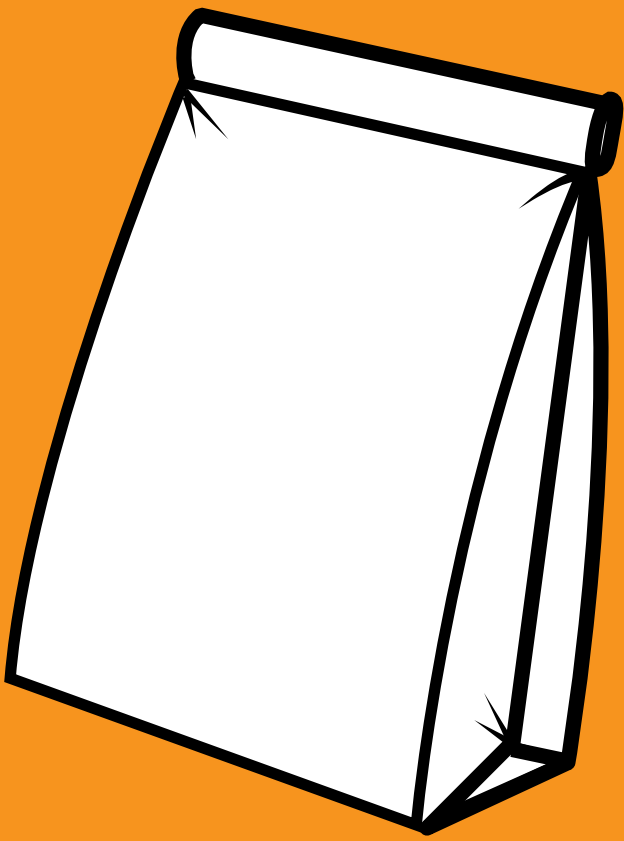

[hobartcity.com.au/single-use-plastics-calculator](https://hobartcity.com.au/single-use-plastics-calculator)

Use this simple spreadsheet calculator to estimate the impact of changing from your current products to compostable alternatives. Common items have already been included and you can add more items if required. It is an easy 3 step process.
